

IFE-MS Mounting Straps

IFE-MS are part of IFEs engineered mounting product range. Each mounting strap is custom designed for the customers application. IFE will work to guide the design process toward a solution that will work for the customers application and use existing tooling to avoid or at least minimize tooling costs. The parts can be designed with the following features:

- Parts can be round, flat or custom shaped
- IFE-MS feature solid barrel trunions for maximum strength
- Parts can be produced with zinc plated carbon steel or stainless steel (band and hardware)
- Many tools are available so low volume parts can be proposed with little or no tooling costs

IFE-MS Mounting Straps

Design Questionnaire

- Does the customer already have a mounting strap design?
If yes can a drawing be supplied?
Does the customer have flexibility in bandwidth, fastener types or attachment method? (*this flexibility could allow IFE to offer a solution from existing tools to save money.*)
- What are the dimensions of the component that is being mounted?
Is a design with the exterior dimensions available?
- What is the component being mounted to?
Can design details be supplied?
- Does the customer have specific corrosion resistance requirements?
- What is the temperature for the application?
- Estimated annual volume?
- Application name?

Due to our program of continuous improvement, specifications may be subject to change.
